

HPV VACCINE

protects your
child from
cancer.

1 IN 4 AMERICANS HAVE HPV.

Most don't know : **HPV** causes certain cancers.
They have HPV. : HPV causes genital warts.

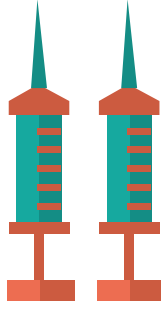

14 million
are newly
infected
each year.

HPV VACCINE PREVENTS 6 TYPES of cancer including cervical, mouth, throat, anal, and other cancers that risk health and life.

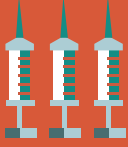

the **HPV VACCINE** IS SAFE AND EFFECTIVE. PROTECTION LASTS THROUGH adolescence and young adulthood.

Yearly in the U.S., about 30,800 cases of cancer are caused by HPV.

Children should get vaccines while their immune systems are developing.

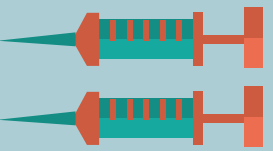

Children **ages 11 and 12** should have the vaccine. **This is when their immune system has the best response.** Most children who get the vaccine on time will only need **two doses. Children should be protected BEFORE they are exposed to HPV.**

If they wait until age 15, they will need three doses.

HPV VACCINE protects your child from cancer.

Children ages
11 & 12
should be
vaccinated.

Most will
only need

79 million Americans have some form of HPV. That's **25% of the U.S. population**. Almost everyone will get HPV at some point in their lives if they do not receive the vaccination.
